DETAILED ACTION

The preliminary amendment 01-13-05 has been entered.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kim(US 6,724,267) in view of Rasmussen (US 5,561,398).

The reference by Kim discloses a VCO see figures 2 and 3, where figure 2 shows the general even number of amplifiers(202-208). The amplifiers have first input and a second input; note in figures 2 and 3, two negative inputs are shown and thus the first and second inputs(312,314) in figure 3, allow for the gain from input to output to be negative. The amplifiers are coupled in a ring configuration with inputs connected to outputs and each of the inputs of the amps connected to one of the outputs of the other amps so as to be distant by an even number of stages(see figure 2 connenctions, and stages 202,204).

Art Unit: 2817

The reference does not show a PLL used to control the delay stages via the LC tank for example, but this is conventional for LC VCO's and allows for the frequency of the oscillator to be tuned.

The reference by Rasmussen is typical, see abstract and figure of a differential stage amp(28) for use in a ring oscillator configuration and tune signal Vtune. This again is conventional when the VCO is implemented in a PLL for frequency control.

In light of the above it would have been obvious for one of ordinary skill in the art to have recognized that the differential LC ring oscillator of Kim may be part of a PLL where a control voltage is developed to enhance frequency control to determine a target frequency.

Allowable Subject Matter

3. Claims 2,3,4,7,8,9,10,11, and 12 are allowed.
4. Claims 5 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
